Understanding the I90 RVM List

Many of the radar vector maps (RVMs) rely on a unique naming style due to the large number of RVMs the I90 TRACON has stored in their database. A few tips below are provided to better understand what maps contain and help find what you are looking for.

- I90 maps and map names are often specific to what flow both IAH and HOU are actively using as boundaries change based on which combination of operations are active at both airports.
- Position-specific maps outline the associated position's delegated airspace for the applicable IAH/HOU flow selected.
 - EAST/WEST is utilized for the late-night IAH flow.
- Maps containing "ALT" mean "Alternate" and are alternate versions of their accompanying map.
 - Final positions: Maps often utilize a different line marking style for final sectors.
 - Position-specific maps: Delegated airspaces with base and ceiling altitudes.
